

Answer: single precision floating point

1 bit for sign

8 bit for Exponent

23 bit for Fraction.

-47.7

(1) first convert 47 to binary

	<u>Quotient</u>	<u>Remainder</u>
47 / 2	23	1
23 / 2	11	1
11 / 2	5	1
5 / 2	2	1
2 / 2	1	0
1 / 2	0	1

So, 47 D = 101111 B.

(2) Now convert 0.7.

0.7 * 2	= 1.4	1
0.4 * 2	= 0.8	0
0.8 * 2	= 1.6	1
0.6 * 2	= 1.2	1
0.2 * 2	= 0.4	0
0.4 * 2	= 0.8	0
0.8 * 2	= 1.6	1
0.6 * 2	= 1.2	1

Answer: single precision floating point

1 bit for sign

8 bit for Exponent

23 bit for Fraction.

-47.7

(1) first convert 47 to binary

	<u>Quotient</u>	<u>Remainder</u>
47 / 2	23	1
23 / 2	11	1
11 / 2	5	1
5 / 2	2	1
2 / 2	1	0
1 / 2	0	1

So, 47 D = 101111 B.

(2) Now convert 0.7.

0.7 * 2	= 1.4	<u>1</u>
0.4 * 2	= 0.8	<u>0</u>
0.8 * 2	= 1.6	<u>1</u>
0.6 * 2	= 1.2	<u>1</u>
0.2 * 2	= 0.4	<u>0</u>
0.4 * 2	= 0.8	<u>0</u>
0.8 * 2	= 1.6	<u>1</u>
0.6 * 2	= 1.2	<u>1</u>

$$\begin{array}{rclcl}
 0.2 & \times 2 & = & 0.4 & \boxed{0} \\
 \swarrow & & & \searrow & \\
 0.4 & \times 2 & = & 0.8 & \boxed{0} \\
 \swarrow & & & \searrow & \\
 0.8 & \times 2 & = & 1.6 & \boxed{1} \\
 \swarrow & & & \searrow & \\
 0.6 & \times 2 & = & 1.2 & \boxed{1}
 \end{array}$$

if we continue, 0011 will repeat.

$$\text{So, } 0.7D = 0.101100110011001100110011$$

$$\text{So } -47.7 = -101111.101100110011001100110011$$

=
After normalizing,

$$-1.01111011001100110011001100 \times 2^5$$

23 digits.

1	10000100	011110110011001100110011
---	----------	--------------------------

$$\begin{aligned}
 \text{Exponent} &= 5 + 127 \quad (\text{Adding bias}) \\
 &= 132
 \end{aligned}$$

$$132D = 10000100B.$$
